

SMART BANKING MANAGEMENT SYSTEM

This project is developed using **Java Servlet, JDBC, MySQL, HTML, and CSS**. It automates banking operations digitally and provides functionalities such as account creation, deposit, withdrawal, transfer, and balance checking.

Technology	Usage
HTML	Frontend Pages
CSS	Animations and Attractive UI
Servlet	Backend Logic
JDBC	Database Connectivity
MySQL	Database
Tomcat	Server

Database Creation

```
CREATE DATABASE bankdb;

USE bankdb;

CREATE TABLE accounts(
  accno INT PRIMARY KEY,
  cname VARCHAR(100),
  mobile VARCHAR(15),
  email VARCHAR(100),
  password VARCHAR(50),
  acc_type VARCHAR(30),
  balance DOUBLE,
  address VARCHAR(200)
);
```

DBConnection.java

```
package com.bank.util;

import java.sql.Connection;
import java.sql.DriverManager;

public class DBConnection {

    static Connection con;

    public static Connection getConnection() {

        try {

            Class.forName("com.mysql.cj.jdbc.Driver");

            con = DriverManager.getConnection(
                "jdbc:mysql://localhost:3306/bankdb",
                "root",
                "root");

        } catch (Exception e) {
            e.printStackTrace();
        }

        return con;

    }

}
```

AddAccountServlet.java

```
@WebServlet("/AddAccountServlet")
public class AddAccountServlet extends HttpServlet {

    protected void doPost(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException, IOException {

        int accno = Integer.parseInt(request.getParameter("accno"));
        String cname = request.getParameter("cname");

        Connection con = DBConnection.getConnection();

        PreparedStatement ps =
            con.prepareStatement(
                "insert into accounts values(?,?,?,?,?,?,?)");
    }
}
```

Features

1. Add New Account
2. Deposit Money
3. Withdraw Money
4. Fund Transfer
5. View Accounts
6. Search Account
7. Login System
8. Mini Statement

Conclusion:

The Smart Banking Management System is an excellent CRUD-based real-time Java web project. It helps students understand Servlets, JDBC, MySQL integration, and frontend-backend connectivity.
